

EchoBloc™

EchoBloc™

Sound Absorption Control Type

EchoBloc is a specially designed gypsum board with the capability of reducing echo in wide spaces by absorbing sound through round and square holes on to the glass fibre matt bonded at the back.

EchoBloc can provide NRC value up to 0.85.

Areas where better speech quality is required like Conference or Seminar Rooms. Areas where reverberations or noise needs to be reduced like Airports, Railway stations, Offices and Hospitals.

Metric : 1200 x 2400mm
