

# FireBloc™

FireBloc™

Fire Resistant Type

FireBloc is a fire resistant gypsum board for internal applications where a particular area needs to be protected for a certain period of time in case of fire. Its core has special properties which makes it last longer in case of fire and blocks the flame from spreading to the surrounding areas.

Fire resistance systems can provide fire rating up to 4 hours.

High traffic areas like airports, hospitals, educational institutes. Areas having valuable data like server rooms. Emergency escape areas like emergency stairs and elevators. All types of shafts and column and beam structures.
