

# HeatBloc™

HeatBloc™

Aluminum Foil Laminated Type

HeatBloc is a special gypsum board with polyester metallised film bonded at the back side which reflects thermal radiation, reducing heat transmission.

HeatBloc provides thermal resistance (R) of 0.41 m<sup>2</sup> K/W when used with a 25mm cavity (foil side should face the cavity).

Areas where better work environment is required without spending money on air conditioning setup like Textile/ garments factory. Areas where heat needs to be blocked like generator rooms.

Metric : 1220 x 1830mm

Metric : **12.5mm**
